

The Janitor II for DOCS

NEW ENHANCED VERSION

FEATURES

- Delete unwanted entries from any validation tables.
- Merge multiple table entries into one.
- New wizard controlled user interface.
- Identify profiles with missing components.
- Identify and re-import document components with no profile.
- Document Server load balancing.
- Full logging features.
- Now supports MS SQL, Sybase and Oracle.

BENEFITS

- No need to write SQL scripts or use a SQL Editor for routine tasks.
- Clean up all your lookup tables.
- Ensure that all documents are present and accessible.
- Maintain database integrity.
- Maintain Document Server performance and reliability.
- Just point and click with the new easy to use wizard interfaces.
- Allows an Administrator full control over any validation objects.
- Save time and valuable resources.
- Maintain your DOCS SQL Databases without being a SQL Guru!
- Prevent disastrous mistakes caused by faulty SQL scripts.

Do you want to remove the names of users who are no longer with your organization? Is writing a SQL script to clean up your validation tables a risky task that you would rather not tackle?

Scour the system for missing documents or profiles.

Janitor II is full of new features to ease the arduous task that Administrators often find themselves facing when maintaining their DMS system.

Let the new Janitor II do the work for you painlessly, quickly and easily.

REQUIREMENTS

DOCS Open 3.7.2 or later on the Janitor II workstation.
Supports PowerDOCS, CyberDOCS.
